ParaCleat

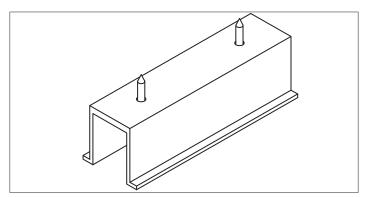

High strength, non-corrosive, removable, plastic anchor

The ParaCleat is an ICC approved fastener and has been developed as a solution for fastening treated wood to the top of parapet walls. Metal flashing is then fastened to the treated wood.

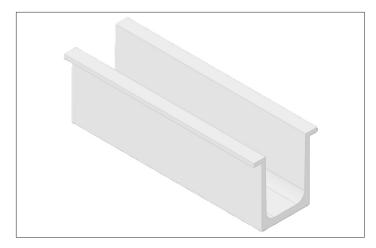

ParaCleat can be used to splice edge form boards together and comes with pre-drilled holes. When an edge lift is required, the ParaCleats can be removed and refastened, making the ParaCleat the most universal, efficient, cost-effective, and simple method for attaching parapet wood.

ParaCleat fasteners comply with requirements provided under NRCA-SPF Chapter 8 guidelines.

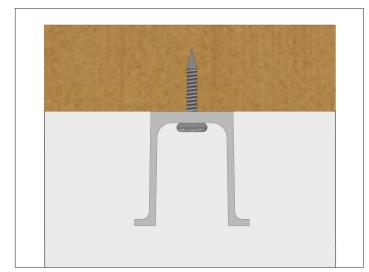

ParaCleat fastened to tilt-up concrete wall panel

ParaCleat is supplied with 1/4" x 1-1/2" flat-headed wood screw anchors
