

Slab-on-Grade Concrete Curing Blanket

Single-use, non-woven concrete curing blanket for slab-on-grade, flatwork, retail, industrial, tilt-up, site paving, and healthcare projects

Slab therapy begins with superior hydration and an even cure of the slab. The Slab-on-Grade Concrete Curing Blanket is engineered with absorbent synthetic fibers that maximize the amount of water held in each roll.

Proper curing of concrete maximizes strength and durability while reducing cracking, crazing, scaling, dusting, and pop-outs. Improve abrasion resistance, reduce concrete permeability, and reduce discoloration.

Standards

- Exceeds ASTM C 171
- Exceeds AASHTO M-171
- Complies with vapor transmission rates specified in ASTM C-171-03.

Slab-on-Grade Concrete Curing Blanket

Slab-on-Grade Concrete Curing Blanket				
Part No.	Description	Size	Rolls per Pallet	TL Quantity
SBSCSWCB8	Slab-on-Grade Concrete Curing Blanket	8'x200' (1600sf)	25	600

Advantages

- Yields the maximum amount of concrete hydration possible
- Easy to install with 2 people and one high volume water hose
- No re-wetting or external hydration system needed for 7 day curing period

Applications

- Slab-on-Grade
- Flatwork
- Retail
- Industrial
- Tilt-Up
- Site Paving
- Healthcare
