

SureGrip

Durable embedment strip for anchoring to concrete

SureGrip provides anchoring for all types of bolted joints when embedded in concrete, even if the screws need to be removed and attached again.

SureGrip provides secure anchoring regardless of the number of times a screw needs to be refastened.

SureGrip is an extruded plastic composite made from recycled plastics and designed to be a durable alternative to using treated lumber.

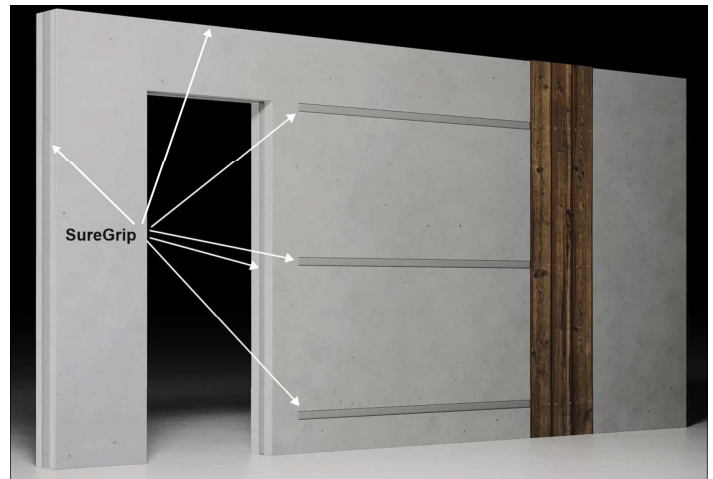

Cast SureGrip in concrete and anchor as needed.

Solid concrete walls and concrete products can now use SureGrip to immediately secure bolts and screws for many applications as well as provide protection for the insulation in insulated concrete wall applications.

SureGrip embedment strips are cast into the concrete in precast, site cast tilt-up, and cast-in-place concrete forming applications. Then windows and doors are installed by fastening to the SureGrip.

SureGrip is cast into the top of concrete walls for securing parapet accessories. SureGrip is used on the perimeter of insulated concrete panels to protect the insulation from damage.

Use SureGrip to secure windows, doors, and wall anchor.

SureGrip				
Part No.	Description	Height	Width	Length
SBSGES	SureGrip Embedment Strip	1-3/8"	1-3/8"	6' - 6-5/8"

Full pallet contains 256 embedment strips

SureGrip is an extruded plastic composite that exhibits properties very similar to concrete in regards to varying temperatures, water resistance and other external factors, thus providing durable solutions for bolted joints over time.

SureGrip provides a thermal break, insulation protection, and allows for fastening and re-fastening to concrete.

SureGrip provides all the solutions for the problems exhibited by using treated lumber as an embed.

SureGrip seen in black providing detail on a concrete wall when not being used for anchoring.

SureGrip can be used to anchor all different types of fasteners creating potential for a variety of applications on a single product or project.

SureGrip provides a secure hold in the embedment material, even if the embedded strip is subjected to heavy-duty usage.
