

SureLift (SL) Insert*

An effective lifting insert with disposable void former and slide-on plastic feet

The SureLift (SL) Insert is designed for lifting tilt-up panels. The insert develops high pull-out strength for every panel thickness (see table).

The integrated plastic former has antennae to identify the insert location and removable cap to keep concrete out of the recess. Once the disposable former is removed, the lifting insert is exposed.

The slide-on plastic feet, available for +1/4", +1/2" or +3/4" height adjustment, keep the steel insert feet away from the panel face to prevent corrosion.

Double SureLift (SL) Insert

The capacity of the SureLift Insert is increased by using two inserts in combination. The two inserts, joined with rebar, develop an even higher pull-out strength for every panel thickness (see table).
