

# SureSaddle 10 kip Bridge Overhang Bracket

## 10 kip overhang deck support for both structural steel and precast concrete beams

The SureSaddle Bridge Overhang Bracket is a lightweight and easy to assemble workhorse that allows for a 5,000 lb safe working load per saddle.

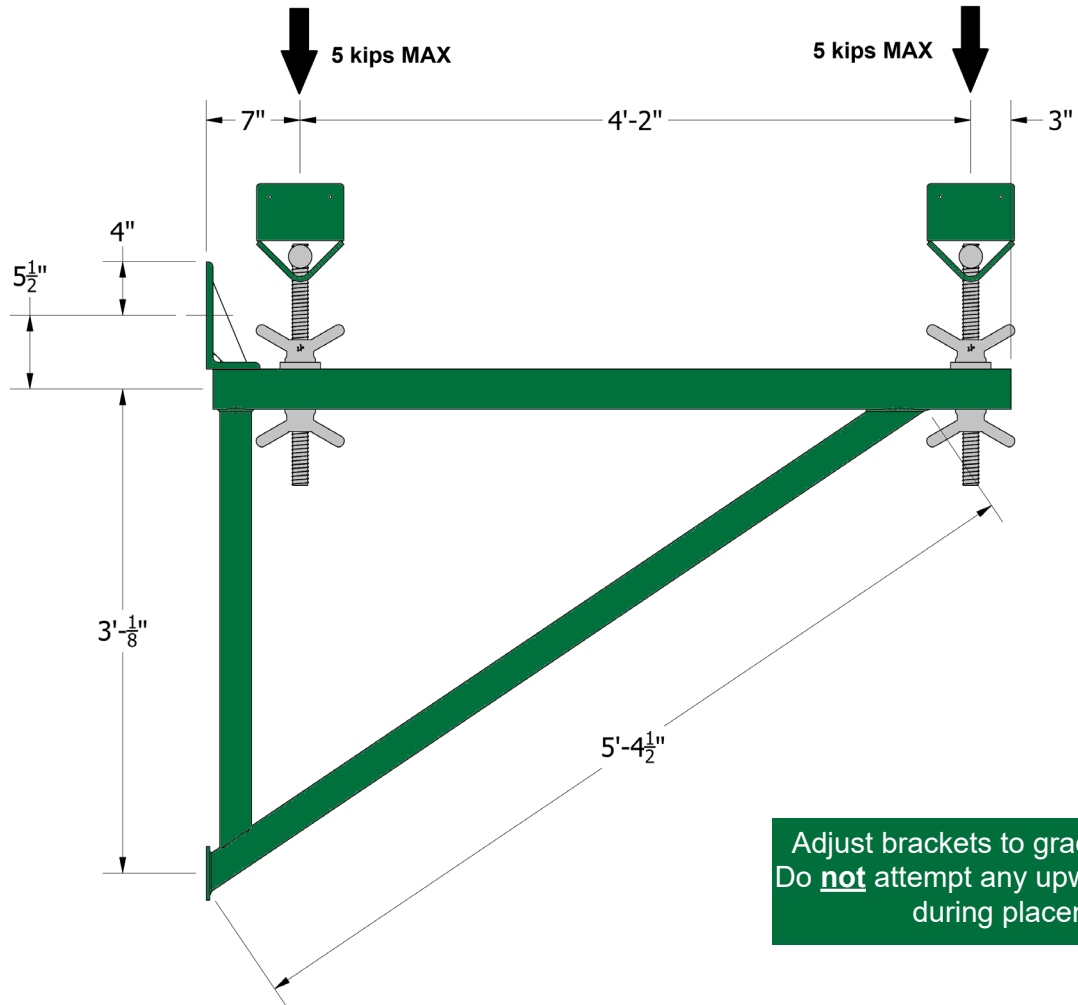

Attached the SureSaddle Bridge Overhang Bracket through the web of a steel beam with a 3/4" grade 5 bolt or concrete beam with a 3/4" cast-in-place insert. The combined loading should always be calculated on the bolt and insert when used.

The saddle assemblies are designed to adjust vertically and accept 4" nominal sized lumber.

| Bridge Overhang Brackets |                                           |           |                  |                       |
|--------------------------|-------------------------------------------|-----------|------------------|-----------------------|
| Part No.                 | Description                               | Top Chord | Maximum Vertical | Maximum Vertical SWL* |
| SBSS10KBOB               | SureSaddle 10 kip Bridge Overhang Bracket | 60"       | 36-1/8"          | 10,000 lbs            |

\* Safe Working Load (SWL) based on 2:1 safety factor and 5,000 lb maximum capacity per saddle jack.
